Art Unit: 1763

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 28-45 and 49-50, drawn to an apparatus, classified in class 156, subclass 345.31.
- II. Claims 46-48, drawn to an apparatus, classified in class 156, subclass 345.43 .
- III. Claims 51-64, drawn to a method, classified in class 134, subclass 1.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions (I & II) and III are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced in another apparatus, such as an apparatus that disengages the reaction chamber from the chamber base by moving the chamber base instead of lifting the reaction chamber as in Invention I, or an apparatus that does not have a vertical electrode as in Invention II. Also, the apparatus can be used for treatment processes without the evacuating and venting steps of Invention III.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. The mode of operation of Invention I includes a reaction chamber-lifting device, a chamber base sealingly engageable with the bottom of the reaction chamber, a guide and a transfer

mechanism that are not required by Invention II. Also, the mode of operation of Invention II includes a vertical electrode electrically coupled to a horizontal electrode, which is not required by Invention I. Two-way distinction exists and the inventions are properly restrictable.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
